

THE COMPETITION JUST CAN'T CUT IT

THERE ARE MORE PRECISION AIRCONVEY CUTTERS INSTALLED THAN ALL OTHER BRANDS COMBINED

Superior design and high-performance components make PAC cutters #1. See for yourself why PAC is the smart choice.

1. Shaftless cutting chamber & open box rotor:

For free passage of air and smooth quiet cutting at consistent pressure.

2. Cylindrically ground, rotating fly knives:

Our sharpening techniques ensure accuracy and tight clearances. Proprietary milling processes match fly knives to rotor notches for secure, positive location and retention.

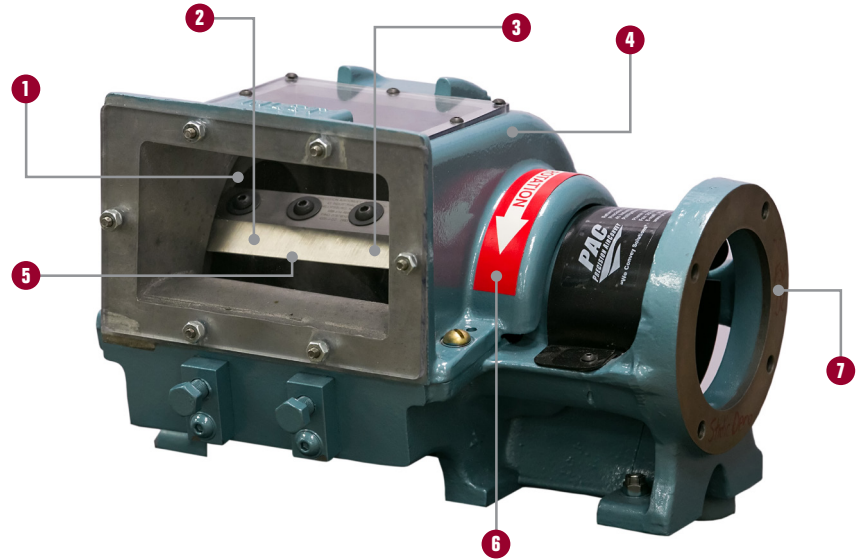

3. Two- or six-knife designs: AISI-D2 tool steel, in optional CPM (A8) or tungsten carbide, to cut film to .0005" with a controlled knife clearance of .00025".

4. Removable aluminum top cover: Safe and easy access to the cutting chamber for maintenance.

5. Angled cutter: Reduces sound significantly and provides shock-free, low-noise shear cutting.

6. High-precision ABEC-7 bearings: Our outboard sealed bearing design prevents waste material contamination from contact with lubricants or other substances. The world's best ball bearings give PAC cutters the tightest fly to bed knife clearance.

7. Compact space-saving design: A flange-mounted motor and low profile ease installation and eliminate the need for a bulky separate base.
