

SAVE MONEY AND INCREASE PRODUCTIVITY WITH THE TRIMPAC^{EZ} – A CONVENIENT TRIM HANDLING SOLUTION!

How it works

The TrimPAC^{EZ} vacuums trim waste through an inline material handling fan, to an on-board cyclone and into a high-capacity collection bag. A dust collection system separates trim from the airstream and provides quick filter access for easy removal and replacement. The TrimPAC^{EZ} can handle paper, die cuts, knock outs and continuous trim. An optional cutter allows you to increase bulk density.

The TrimPAC^{EZ} saves time and money

- Automatic trim waste collection increases line efficiency and reduces labor costs.
- Dual collection bags allow continuous operation — you can divert trim into one bag while changing the other.

The TrimPAC^{EZ} is convenient

- Pre-engineered, it arrives ready to install and operate.
- Mobile, on lockable swivel casters.
- Virtually maintenance-free.
